SEJO BASIC *(HE/HIM)*

SOFTWARE ENGINEER / FRONT-END DEVELOPER / GRAPHIC DESIGNER

I am a Software Engineer and Graphic Designer with a focus on, but not limited to, *Front-End Development* and *Creative Design*. With a background in Design, I bring a great deal of artistic detail to front-end development. My passion for creativity motivates me to continuously expand my skill set through new technologies, inspire others, and work collectively to bring new ideas to life. I am confident that if given the opportunity, I can be a useful talent to your company.

PROJECTS

Layr Sequencer - *Live* | *Git*
Interactive music application featuring a 16-Step Sequencer for creating melodies/patterns and a 24-key piano with drum pad mapped to individual keys on the keyboard
- Designed interactive UI with React, Bootstrap, HTML, CSS and Photoshop
- Utilized Ruby, PostgreSQL, Active Record, and Bcrypt password hashing algorithm to manage encrypted user information

Trails - *Git*
Hiking application created to help users find popular trails. The user has the ability to favorite trails and leave reviews.
- Created UI elements using React, Bootstrap, HTML, and CSS that automatically render when new backend data is populated
- Managed encrypted data using Rub=y, PostgreSQL, Active Record, and Bcrypt password hashing algorithm
- Developed functionalities for users to favorite and write reviews on trails and receive recommendations based on rating/popularity

Simple Fridge - *Git*
Simple fridge is a group project application that keeps track of the grocery items in your fridge and shows how many days until the items expire. The user has the ability to add new items and remove current items from their fridge.
- Developed with a React front end and Ruby/Sinatra backend, creating our own API.
- Managed data using Ruby and Sinatra
